

Medium MultiChoice

Simple Multi-choice example

- 1 x multi-choice question
- 8 x expressions
- 4 x conclusions

This example shows how to ask conditional questions. It also uses merging of diverse branches.

A] Expression

= [alpha]

Succeeds if the answer exactly = the set containing one item, alpha

B] Expression

= [alpha, beta]

Succeeds if the answer exactly = the set containing two items, alpha & beta

C] Expression

= [alpha, beta, gamma]

Succeeds if the answer exactly = the set containing three items, alpha, beta & gamma

D] Expression

= []

Succeeds if the answer exactly = the empty set i.e. the user did not choose any item

Note: VisiRule harvests the items from the expressions and will detect that there are 3 items referenced in the expressions
